

CUSTOMER GUIDE: How to Uninstall the Software

Overview

If you have tried FLEETMATE, and have found that the software does not offer the features that you need, no problem. You can quickly remove it in two (2) easy steps.

1. Remove the Software
Click **Start** | **All Programs** | **FLEETMATE** | **Uninstall FLEETMATE**. Follow the on-screen instructions. This will remove FLEETMATE and its software components from your PC.

As a safeguard, this will not delete your database. So if the uninstall was unintentional, simply reinstall FLEETMATE to easily recover from the mistake.

2. Remove your Database
If you were using the standard database, open Windows® File Explorer and delete the **C:\Users\Public\FLEETMATE** folder.

If you were using a SQL Server database, ask your database administrator to delete your FLEETMATE database that was created on Microsoft® SQL Server.
